## WE ARE HIRING APPRENTICES!!

**We are seeking hard working and enthusiastic individuals to join our team as craft/technical apprentices at our manufacturing headquarters in Coleford**

### **About the Apprenticeship:**

An SPP Pumps Apprenticeship offers you the chance to train for highly skilled jobs, to gain nationally recognised qualifications and **earn while you learn!**

At SPP Pumps we have a long history of successful apprenticeship appointments and many of our senior positions today are filled by individuals who started out as apprentices and trainees and have developed and grown into senior managers and technical experts.

We work alongside Gloucestershire Engineering Training (GET) who undertake the first year of our Apprenticeship Training at their highly equipped facility in Gloucester. You will also be required to attend weekly day release to GET after successful completion of your first year.

### **What you need:**

An SPP Pumps Apprenticeship is not for those who want to totally avoid academic work, so we need you to have (or expect to get) at least 5 GCSEs at level 4 or above, including Math's, English and Science/Technology.

You also need to show that you want a career in engineering. Maybe a hobby you have a significant interest in such as cars, bicycles, or motorcycles, have done an engineering project in school or belong to an engineering club. Whatever it is, we need to know that you've thought things through and are pretty sure that engineering really is right for you.

Teamwork is very important for us, so we look to recruit people who work well with others. Tell us about how you've worked in a team, whether at school, in sports activities, in organisations such as Guides, Scouts or Cadets, or anywhere else!

### **Recruitment and Selection:**

Please forward your CV and covering letter to the address shown below as soon as possible, and, if you are still at school you need to provide your predicted exam results.

Please send your email to:
